

Rubber moulding with low friction resistance - obtd. by sputtering fluoro-resin on low layer and forming mixed coating of fluoro-resin and e.g. copper

Patent Assignee: NIPPON OIL SEAL IND CO LTD

JP 91020466 B

Priority Applications (Number Kind Date): JP 83174744 A (19830921)

A rubber moulding has a mixed coat provided on the upper layer. Either on a part or on all of the rubber moulding surface, fluororesin coat is sputtered on the low layer and a mixed coat consisting of (a) fluororesin and at least one of the elements copper, zinc, carbon, glass, molybdenum dioxide or **boron nitride**, is provided on the upper layer.

USE/ADVANTAGE - Process can to rubber prods. such as wiper blade, various valves, and oil seal. The moulding has reduced friction resistance.
